Vision statements

Cambridge will be an open-minded, forward-looking city, where visitors feel welcome, and neighbors feel proud of their home and connected to one another.

Cambridge will actively support and foster a strong and resilient community that values livability for diverse populations, social equity, economic opportunities, and sustainability.

Cambridge aspires to be a city where we build a just and democratic community where all voices are respected and heard, and we work together to always protect the opportunity for the least among us to live and prosper in Cambridge.

Cambridge is a wicked smart city that pushes boundaries and welcomes all.

Cambridge is a community where there is equal opportunity for the diverse people who live here. They live in harmony, in a healthy, rich cultural environment that respects their diverse traditions.

Cambridge is a dynamic and evolving community that provides world-class opportunities for all and demands inclusion, cultural & economic diversity, and embraces lifelong learning.

  What we need to do

- **INDICATORS**
  Measures of success

- **TARGETS**
  Desired level of performance

- **ACTIONS**
Alewife working group meeting (June 14, 2016)

Affordability and housing
- Affordability is a major concern.
- There are questions around the balance of housing and retail, both existing and new.

Mobility and transportation
- Traffic is a regional issue, and will require coordination with other cities and agencies.
- The T Station might be improved, through either physical improvements to the facility or connections to the commuter rail.
- It can be unpleasant to travel by car, and more so by foot or bike.

Environment and sustainability
- Jerry’s Pond is a way to reconnect to nature, and is underutilized.
- New or improved open space might be linked development in the floodplain.

Urban Form
- The housing that has been built is not well-integrated into the neighborhoods.
- Create a unifying element like a square

Alewife Revitalization Plan (1979)

Vision:

- New center for research and development.

- The plan aimed to benefit citizens by creating job opportunities, increasing the city’s tax base, removing visual blight and ecological hazards, and by adding useable open space in the area.

Alewife Urban Design Plan

Concord-Alewife Planning Study (2005)

Vision:

- Create a people-oriented sense of place and developing a neighborhood “heart” for people who live, work, play, and shop in Alewife.

Concord Alewife Concept Plan (2005)
Concord-Alewife Planning Study (2005)

Plan’s Implementation:

- Incentives for residential development have created a more mixed-use district.
- Developments have been required to contribute to the creation of a bicycle/pedestrian bridge across the railroad tracks: 1) with dedicated landing locations for a bridge, and 2) with funding for the design of the bridge.

Alewife Transportation Update (2014)

- There is a lot of people going through Cambridge to other employment centers.
- 82% of vehicle trips through Alewife are thru-trips.
- Traffic congestion in Alewife is part of a regional transportation problem.
- Lack of coherence/ connectivity in traffic patterns.
- Update from 2006 Study

Flooding

- Flooding in Fawcett St / 2014.  
  (Source: https://freshpondresidents.org)

- Cambridge Park Drive / 2016.

- Alewife is one of the most vulnerable zones.
- The Concord-Alewife area falls within the Mystic River watershed.
- Impervious surfaces contribute to flooding problems (surface parking).
- Precipitation-driven flooding is likely to become more frequent, expansive, and deeper.
- Cambridge has joined Belmont and Arlington to form the Tri-Community Working Group, which addresses flooding issues that involve all three cities.

“Living with Water” and the Design Community

• Charrette organized in 2014 by ULI focused on the Quadrangle Area in Alewife.

• The goal was to explore a broad set of common themes, strategies, and design opportunities related to sea level rise in the Greater Boston Area.

Temperature Projections

• Heat waves are expected to increase significantly. By 2030, the number of days each year above 90°F could triple. By 2070, there could be more than 2 months in a year over 90°F.

• Extreme heat causes more deaths in the U.S. than floods, hurricanes, lighting, tornados and earthquakes. But heat-related death are preventable.
