Agenda

- Core Values and Vision: Citywide and Alewife
- Why is Alewife an early focus of the citywide plan?
- Alewife Planning Scenarios
 - What to consider when evaluating scenarios
 - The context in which we are planning
 - Urban design framework
- Scenario development
 - Baseline
 - Optimized Baseline
 - Mixed-use Residential
 - Mixed-use Commercial
 - Mixed-use Industrial
- How the scenarios compare
- Next Steps
- Questions for Discussion

The Core Values

Alewife Visioning Workshop, July 21, 2016

City of Cambridge utile Envision Cambridge

A Changing Cambridge

Citywide Vision and Alewife Vision

What we want to be

"Cambridge is a forward-thinking, welcoming, and diverse city. We enjoy a high quality of life and thrive in a sustainable, inclusive, and connected community."

"Alewife should be a sustainable, resilient, mixedused district with convenient and safe connections within the neighborhood and to the rest of the city along with amenities that support interaction and social ties among its residents."

Note: Vision statement developed from public workshop feedback, comments from Alewife Working Group and EC Advisory Committee, and general feedback from the Mobile Engagement Station, online surveys, and other engagement activities and workshops

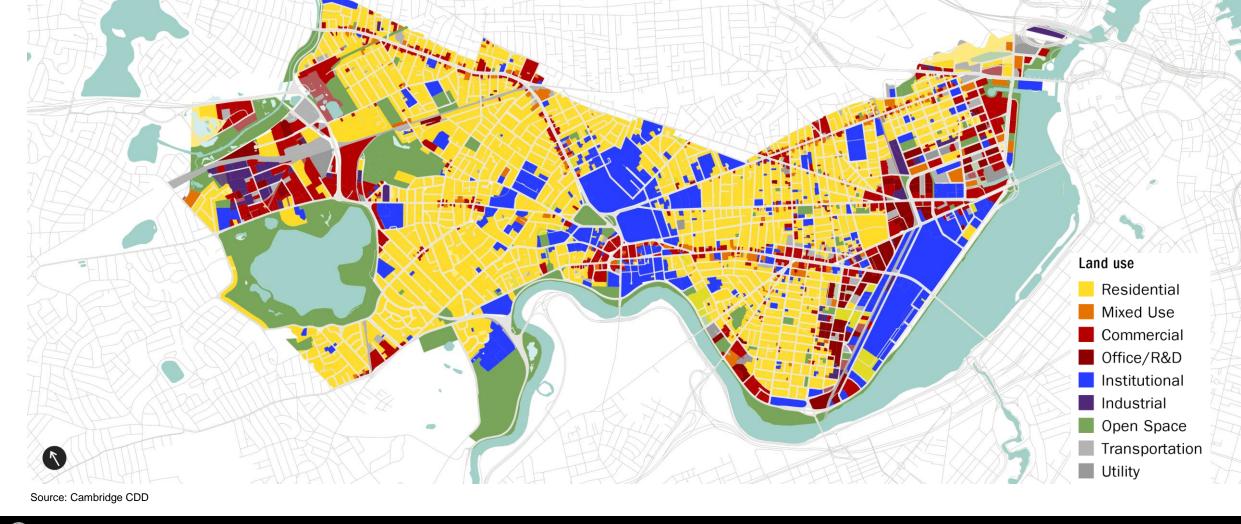

Why is Alewife an early focus of the Citywide Plan?

Community members agree that Alewife needs to be improved. Some of the concerns include the quality and appropriateness of the urban form, the lack of connectivity, and resilience from the impacts of climate change and other stresses.

Alewife, and in particular the Quadrangle, is one of the few areas in the city where significant change can be considered and supported. **Citywide Analysis**

Setting the Larger Context: Parcels by Land Use

Cambridge's diverse and socially-rich residential neighborhoods are bounded by commercial corridors and institutions.

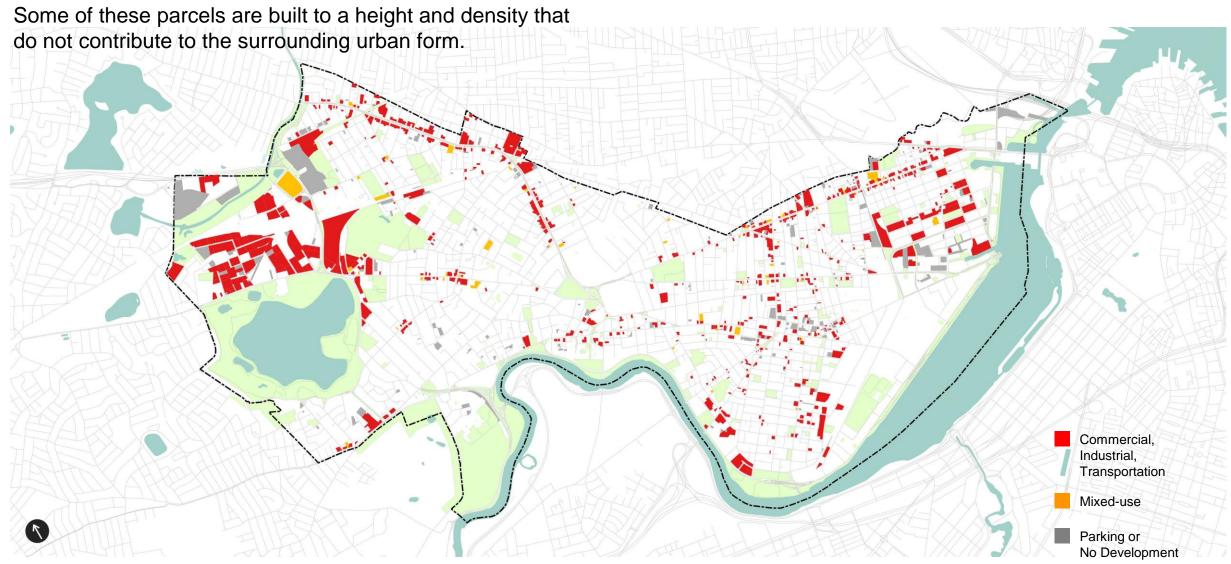

Commercial and Mixed-used parcels

The commercial and mixed-use parcels are located along corridors or distinct pockets in East Cambridge, Kendall Square, and Alewife.

 (\mathbb{N})

Commercial and Mixed-use: FAR < 1.5 or Height < 40 ft.

Source: Cambridge CDD and Assessing Department, excludes institutionally owned parcels

The Quadrangle, Alewife

Study Areas

Alewife Planning

What is a scenario?

Planning scenarios are ways of envisioning multiple futures. Different inputs—such as density, land use, and the street network—can produce different outcomes. The scenarios will guide decisions about future land use, regulations, and economic development strategies.

How will Alewife scenarios inform the citywide plan?

The Alewife scenarios will inform the planning for the rest of the city. For example, if industrial uses are deemed more desirable than housing in Alewife, then the citywide plan might encourage more housing along the corridors.

The draft of the Alewife plan is expected late spring/early summer 2017

Alewife is a mosaic of privately owned parcels

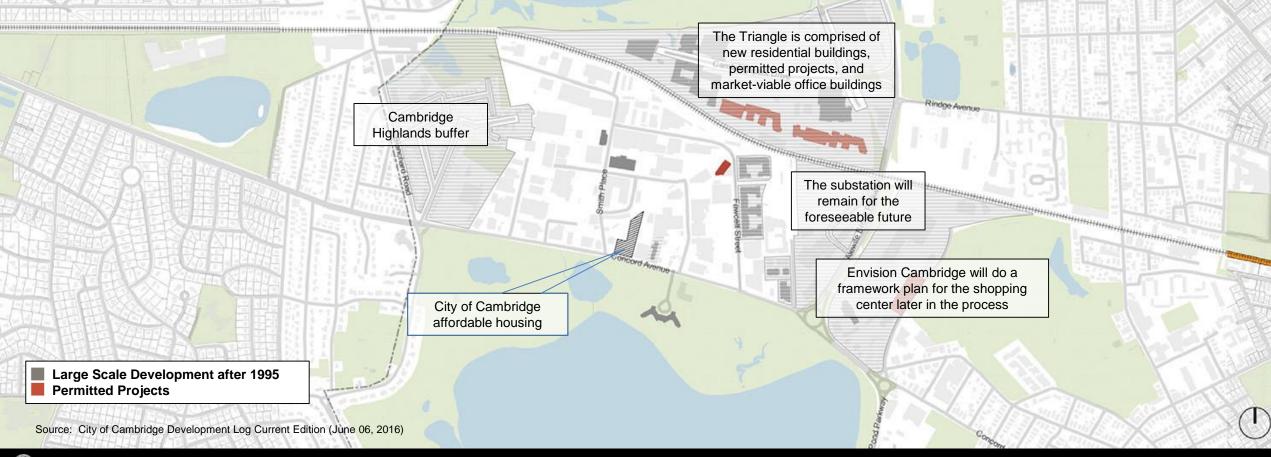

The 99 parcels in the Quadrangle are owned by 48 different owners.

Source: City of Cambridge Tax Assessor and Property Database 2016

HIT

The Quadrangle has the highest propensity to change in the next 15-20 years

Acorn Park

Scenarios focus on the Quadrangle

Parcels less likely to be developed

Existing Development

Permitted Projects

Future Projects

Alewife Visioning from Working Group and Workshops

Livability

- Enhance mobility while moving to/through the area
- Increase public amenities

Diversity and Equity

- Address equity in transportation costs
- Expand access to public space and amenities

Sustainability and Resilience

- Study what an appropriate mix of development might be, to address Learning concerns about the current emphasis on housing
 Emph
- Examine how well-designed density can improve sustainability
- Explore the best approach to building in a flood-prone area

Economic Opportunity

 Expand affordable neighborhood retail and workspaces availability for new businesses

Community Health and Well-being

- Foster a sense of community
- Provide community spaces for informal interaction
- Shift from auto-oriented to pedestrian-oriented design

- Emphasize non-school forms of learning
- Leverage important ecological spaces for learning

Note: This is a summary of feedback from the July 21 Visioning Workshop. Participants were asked to respond to opportunities and challenges in in Alewife through the core values in small groups.

Resilience from sea level rise,

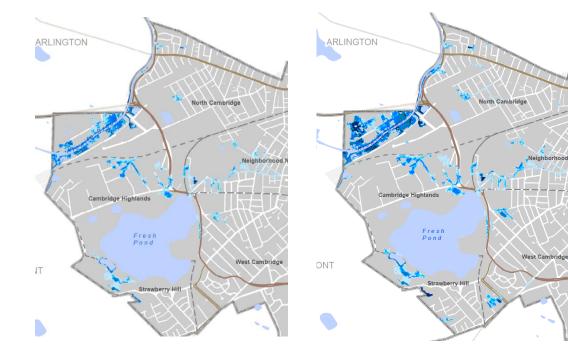

What to consider when evaluating scenarios: Environment

storm surge, and precipitation: Reduced vulnerability

Energy: Reduced GHG emissions and enhanced resilience

Water: Water conservation, clean waterways, and reliable drinking supply

Materials and Waste: Soil remediation, zero waste goals, circular economy

Present 10-yr storm

10-yr storm by 2070 Additional 35 MG Flood Volume 100-yr storm by 2070 Additional 290 MG Flood Volume

Fres

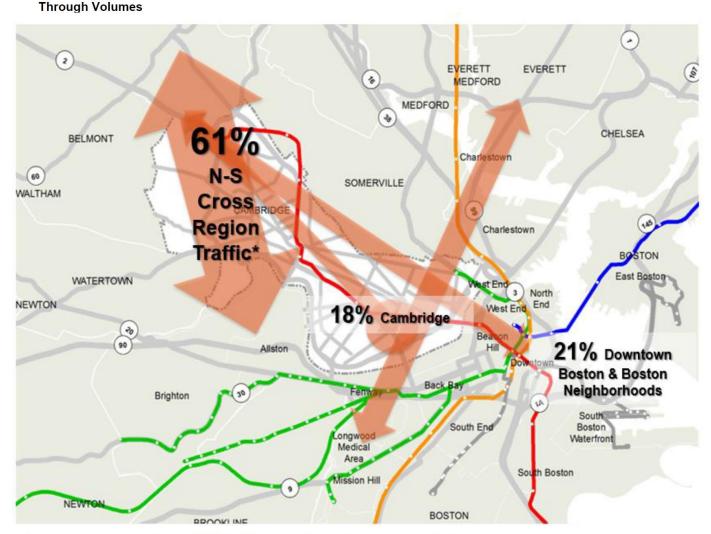

RLINGTON

What to consider when evaluating scenarios: Mobility

Vehicular trips: Managed number of auto of trips generated and/or vehicle trip reduction

Transit: Increased number of transit users and transit options

Active Transportation: Increased number of people biking and walking

* Based on interpretation of 2010 CTPS regional travel demand model data

What to consider when evaluating scenarios: Housing

Housing units: Number of housing units created to meet citywide housing needs

Affordable units: Number and type (e.g., 3-bedroom) created

Housing market: Potential effect of new housing growth on the overall Cambridge housing market

What to consider when evaluating scenarios: Jobs

Commercial space and jobs: Increased space for growing economic sectors

Access to jobs: Skill and education level needed for different economic sectors

What to consider when evaluating scenarios: Revenue and Fiscal Impacts

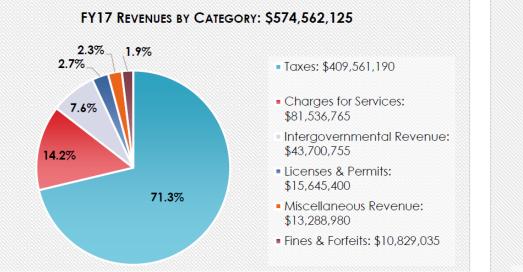

Tax revenue: Increased commercial or residential tax base, which supports robust city services, schools, open space improvements, etc.

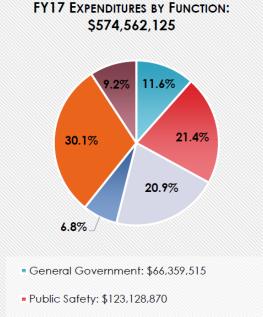

Fiscal Impacts of Development: Increased cost of service for new residents and workers

Funding of infrastructure:

Adequate revenue from new development to contribute to the funding of critical infrastructure (e.g., bridge linking the Quadrangle to the Triangle, district energy plant, storm water infrastructure)

FINANCIAL SUMMARIES - FY17 OPERATING BUDGET

- = Community Maint. & Dev.: \$120,153,330
- Human Resource Development: \$39,243,110
- Education: \$172,793,980
- Intergovernmental: \$52,883,320

What to consider when evaluating scenarios

Environment

-Resilience -Energy, GHG -Water -Materials & Waste Mobility -Vehicular trips -Transit trips -Active Transportation

Housing -Housing units -Affordable units -Housing market

Jobs -Commercial space and jobs -Access to jobs

Tax revenue and fiscal impacts

-Tax revenue of commercial vs residential development -Fiscal impacts of growth -Funding of infrastructure

City of Cambridge utile Envision Cambridge

Urbanism of recent developments

Projecting development trends under existing regulations up to full buildout \rightarrow Baseline

Key assumptions

- Assume same development typologies (maxed-out stick-built residential and 85' life science / R&D commercial)
- Assume full build-out per special permit on all sites
- Projected use mix reflects trends in recent construction and pipeline development (i.e., approximately 65% residential development and 35% commercial development by built floor area)

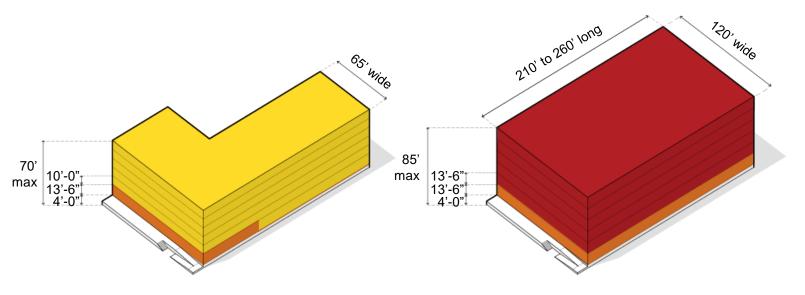

Notes: Recent construction includes projects in the Triangle and Quadrangle built since 2005 Development pipeline derived from CDD development log as of Nov 2015 **Draft Alewife Scenarios**

Scenario Building Prototypes

Residential Prototype

Commercial Prototype

Typical Floorplate: 14,000-20,000 SF

Minimum Floorplate: 10,000 SF

Typical Building Width: 65 Feet

First habitable floor raised 4' for flood protection, with parking below

Typical Floorplate: 25,000-32,000 SF

Minimum Floorplate: 20,000 SF

Typical Building Width: 120 Feet

First habitable floor raised 4' for flood protection, with parking below

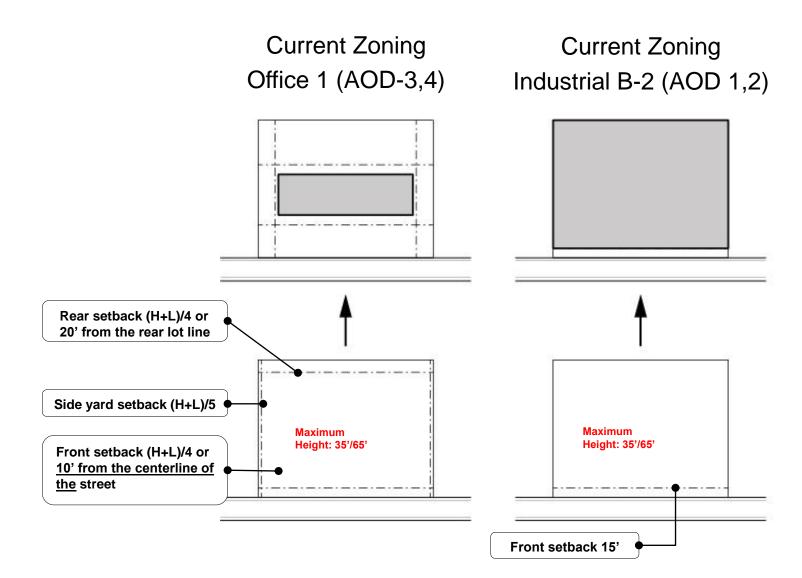

Cambridge Discovery Park Hotel (150 rooms) Office/ R&D (132,000 sq ft) Office/ R&D (96,000 sq ft) Parking Garage (380 spaces)

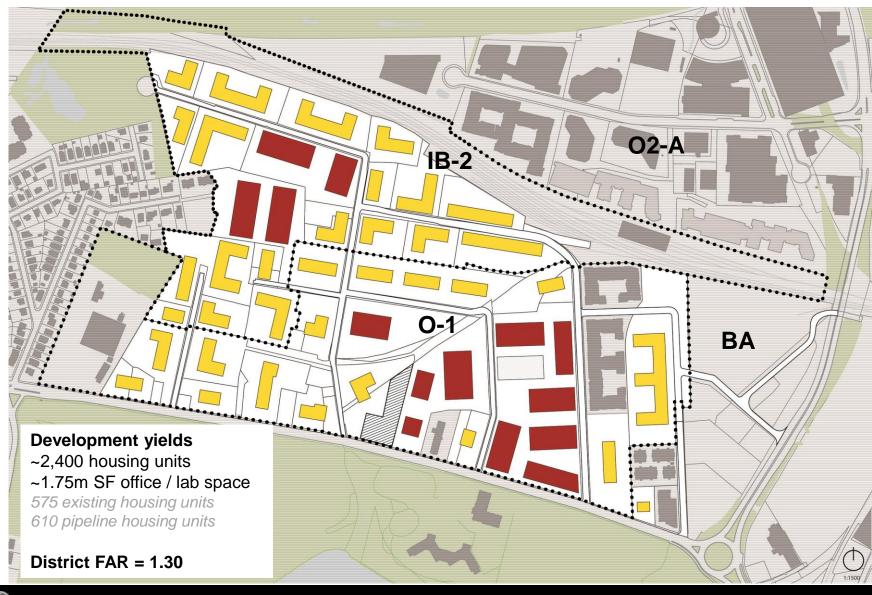

Residential 88 Cam. Dr. (254 units) Parking (185 spaces)

Current Zoning

Baseline: Testing capacity and urbanism under current zoning

PRELIMINARY- Subject to ongoing revision

Zoning Summary

IB-2: 15' front setback with no required rear or sideyards. Under special permit:

- Max. FAR: 1.5
- Max. Height Non-residential: 55'
- Max. Height Residential: 65'

O-1: All setback determined by formula relating to the building's dimensions. Under special permit:

- Max. FAR Non-Residential: 1.5
- Max. FAR Residential: 2.0
- Max. Height Non-residential: 70'
- Max. Height Residential: 85'

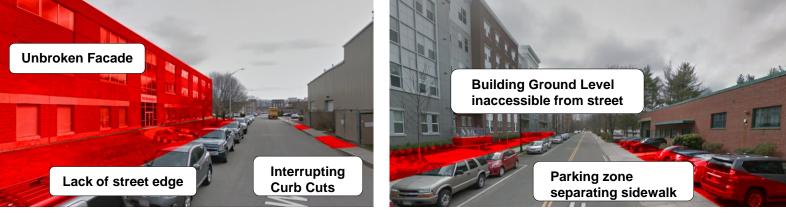

Commercial
 Residential
 Parcels less likely to be developed
 Existing Development
 Permitted Projects
 Future Projects

27

Current conditions: Urbanism challenges

- Long and monotonous street facades
- Required elevated ground floor elevation limits access to buildings and further separates lobbies from the public realm
- Required front yards are suburban in character and separate ground floor uses from the public realm
- The existing side yard requirement breaks up the pedestrian experience with a no-man's land of service functions that make each development an independent enclave
- Lack of street hierarchy or accommodation of all transit modes.

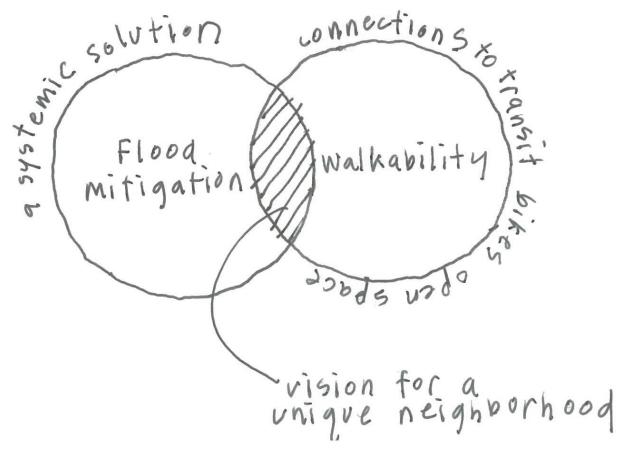

City of Cambridge utile Envision Cambridge

PRELIMINARY– Subject to ongoing revision

Urban design framework: Developing scenarios

Find a systemic solution to the impacts of climate change by aligning with the preparedness planning process

 Build to an elevation of 4' or under for the first habitable floor level, which reduces flood risk from 2070 SLR/SS

In order to realize our vision of transforming Alewife into a resilient neighborhood with strong amenities and sense of place, we need to retain a sufficient amount of value in order to encourage redevelopment.

Create a mixed-use walkable neighborhood that also promotes bicycles and transit

- Create a distributive multimodal transportation network by "completing the street grid" and making better connections to the T
- Create a "there there" for daytime and evening populations and to improve the "quality of address"
- Achieve a scaled transition of new development towards
 Cambridge Highlands

Urban design framework: New street connections

Guiding considerations:

٠

.

- Build on the recommendations of the Alewife Concord Study (2005)
- Better service the neighborhood by creating a distributed network
- Improves the "quality of address" for future development.

- Parcels not part of this analysis
- Recently completed (since 1995)
- Permitted Projects
- Future Projects

Urban design framework: A network of green infrastructure

- Proposed Green Link envisions a landefficient open space network that links the Alewife T to Fresh Pond
- The path could link to the pedestrian/bike bridge to Alewife T station
- Further study will explore the potential to tie this to a district-wide storm water strategy

- •••• Midblock Stormwater Gardens
 - = = Pedestrian/Bicycle Bridge
 - Pedestrian/Bicycle Connections
 - ---- Bicycle Lanes

.

- Open Space
- Parcels not part of this analysis
- Existing Development
- Permitted Projects
- Future Projects

Urban design framework: A network of green infrastructure Green Link and mid-block connection precedents

Urban design framework: Respond to scale of neighboring context

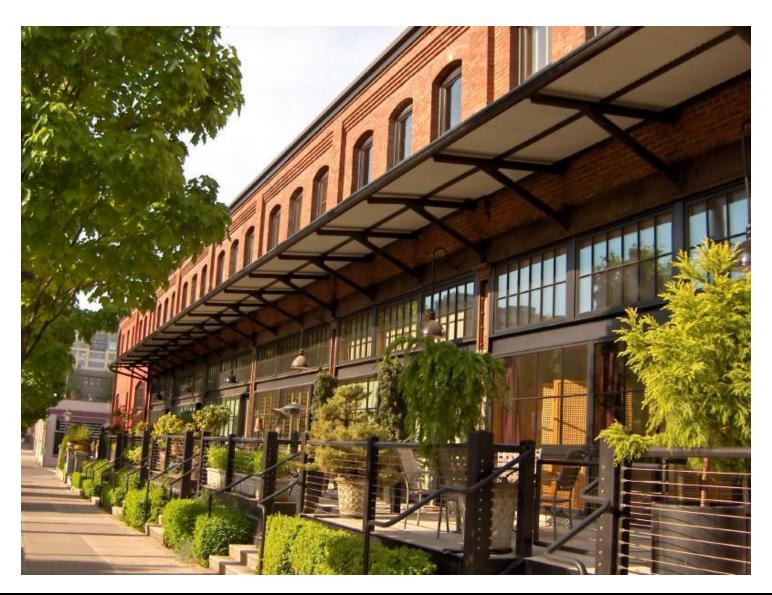

Midblock Stormwater Gardens

- Potential 55' Residential Overlay
- Potential 200' Commercial Overlay
- District Parking Garage
- District Energy Plant
- New Bicycle/Pedestrian Connections
- •••• Bicycle Lanes
- Open Space
- Parcels not part of this analysis
- Existing Development
- Permitted Projects

Future Projects

Draft Alewife Scenarios

Street Types: The Urbanism of "A" streets

Zoning regulations

- First habitable floor at 4'
- All parking must be below 4' elevation and covered by a building or landscaped deck
- Continuous 12' wide raised platform at 4' elevation for all of the A Streets
- Car and service access only permitted from B Streets
- Zero lot lines required for the first 65' off of the front lot line, 30' side yard set back thereafter.
- 30' rear yard setback
- Opening between buildings of between 30-45' required for frontages longer than 250'

Scenario development

Goals: Test the implications of planning choices and enable a discussion about tradeoffs.

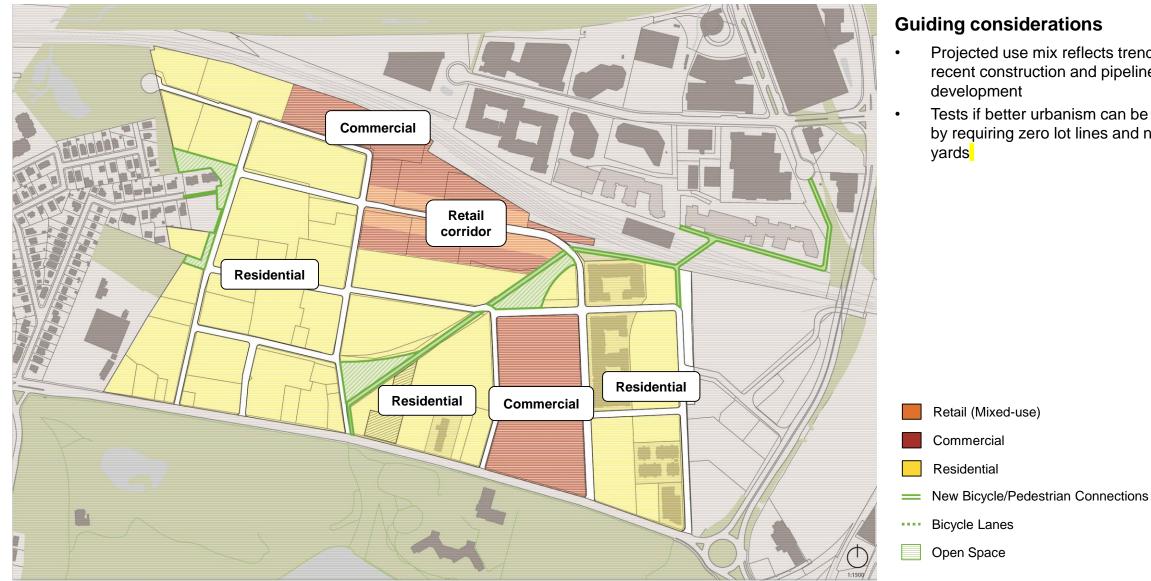

Methodology: Scenarios are structured "thought experiments" backed by data-driven assumptions and tested through analytical frameworks.

Scenario	Optimized Baseline <i>Mixed-used residential at</i> <i>currently allowed density</i>	Mixed-use residential (+ option with high-rise overlay)	Mixed-use commercial (+ option with high-rise overlay)	Mixed-use industrial
Impetus	 Create better urbanism at the same density and use-mix as currently allowed 	 Significantly increase housing Incentivize less suburban development Fewer vehicular trips generated 	 Create better urbanism with the same use-mix at a higher density Increase the commercial tax base Create jobs Minimize residents in the floodplain 	 Provide low-barrier-to- entry jobs for residents Avoid building residential in floodplain Add minimal vehicular traffic (trade-off of higher percentage of truck traffic)
	All scenarios will be evaluated by considering:			
	•			\$\$

City of Cambridge utile Envision Cambridge

(2)

Optimized Baseline: Same urbanism, ~existing FAR

PRELIMINARY- Subject to ongoing revision

Guiding considerations

- Projected use mix reflects trends in recent construction and pipeline development
- Tests if better urbanism can be created by requiring zero lot lines and no side

Optimized Baseline: Typical Block

Maximum height of 70' for residential and 85' for commercial development

Zero lot lines for front and sides within 65' of the front lot line.

30' side yard setback beyond the first 65' in depth from the front lot line.

A Street Front Lot Line Setback is 12" to account for a required 12' deep, 4' high plinth that meets the back of the sidewalk

Sites longer than 250' require a 30'- 45' wide penetration to the rear lot line. The gap must be located a minimum of 30' away from a side lot line.

B Street Front Lot Line Setback is 8" for a planting zone.

Mid-block open space

Green spaces connect to edge of B Streets. 30'

between parcels on B

side yard setback

network

Streets.

Parking and service access only on B Streets

City of Cambridge utile Envision Cambridge

(2)

Optimized Baseline: Ground-floor Program

Development yields

.

- ~2,800 housing units
- ~1.51m SF office / lab space
- ~142,000 SF of ground floor retail
- 575 existing housing units
- 610 pipeline housing units

Baseline: Test-fit Comparison

Development yields

- ~2,400 housing units •
- ~1.75m SF office / lab space .
- 575 existing housing units .
- 610 pipeline housing units .

District FAR = 1.30

How does this compare to the baseline?

Optimized Baseline

Environment

- Closest to the baseline in terms of annual energy consumption, GHG emissions, and waste generation
- Greatest generation potential from solar PVs relative to annual consumption
- Center-of-block open space serves as potential storm water infrastructure

Mobility

•

- The high residential density in this scenario maximizes trip reductions compared to the baseline
- Creates clear hierarchy of A and B streets

Housing

 Generates approximately the same number of housing units as the baseline

Jobs

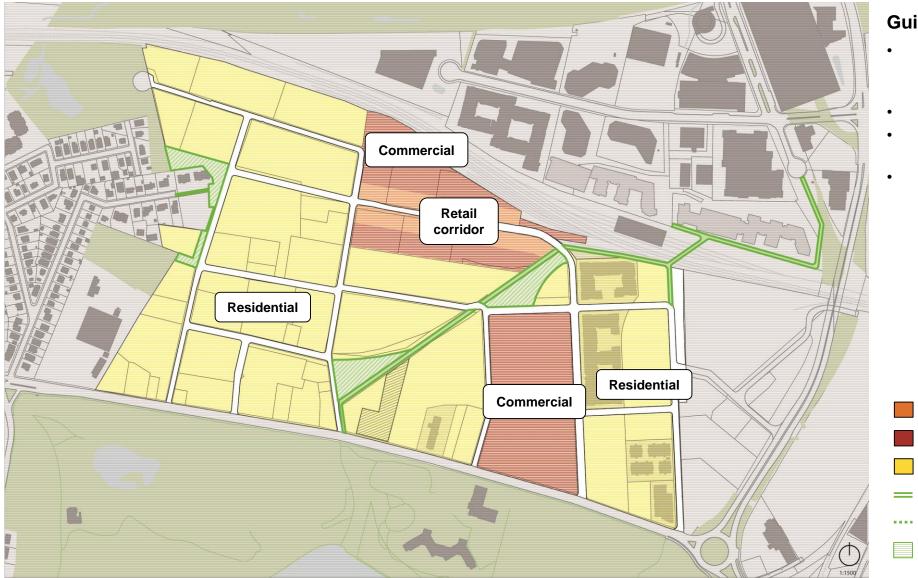

Creates slightly fewer jobs than the baseline and the fewest total jobs than any scenario

Tax revenue and fiscal impacts

- Increases residential population and need for city services
- Increases tax base, not as much as commercial uses
 - Could fund critical infrastructure, such as bridge

Mixed-use Residential

Guiding considerations

- Projected use mix reflects trends in recent construction and pipeline development
- Maximizes housing creation

Retail (Mixed-use)

New Bicycle/Pedestrian Connections

Commercial

Residential

Bicycle Lanes

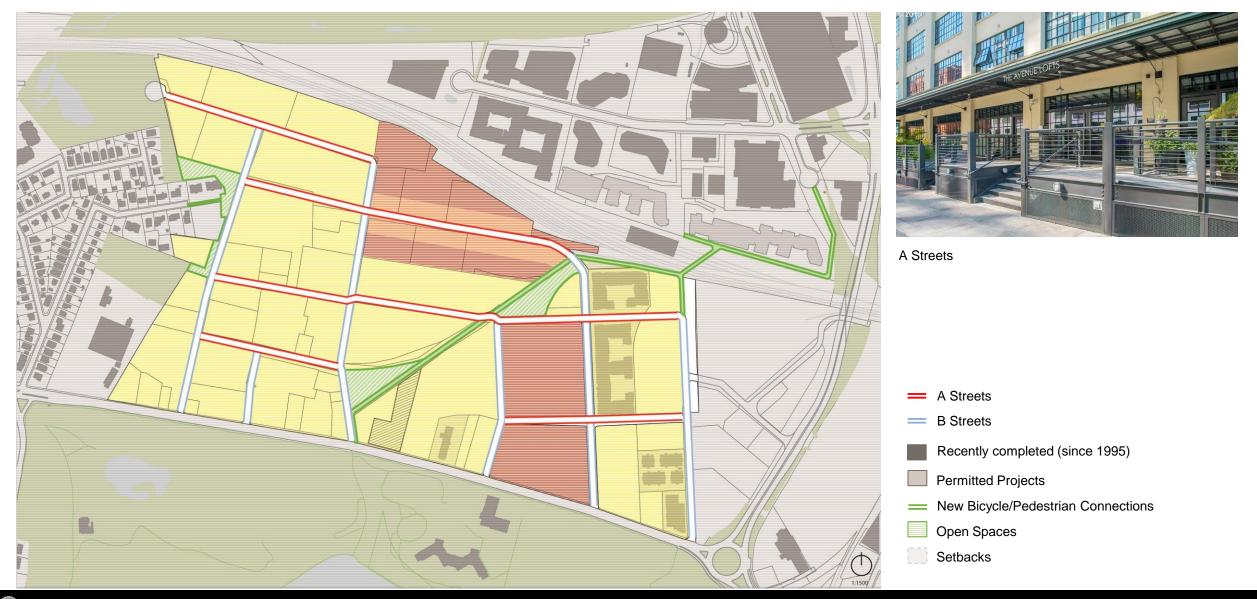

Open Space

- Minimizes impacts on mobility by as the primary land use is residential
 - Creates a retail district to support residential uses along Fawcett Street (east-west) with the possibility of additional distributed ground floor retail in residential blocks.

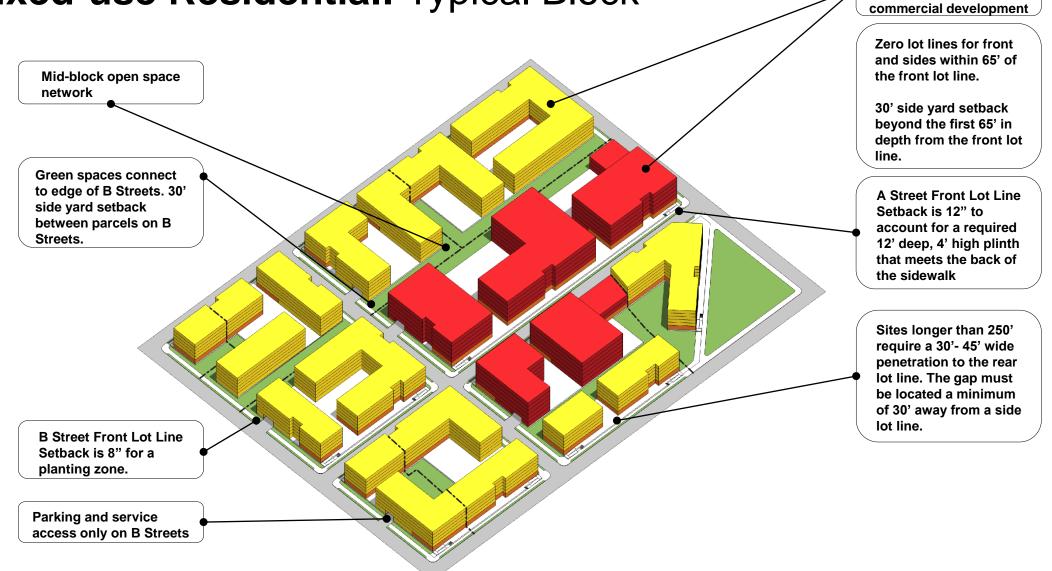

City of Cambridge utile Envision Cambridge

(2)

Mixed-use Residential: Street Types

Mixed-use Residential: Typical Block

Maximum height of 70'

for residential and 85' for

Mixed-use Residential: Ground-floor Program

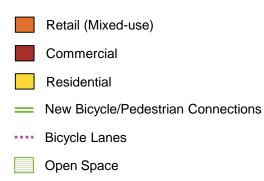

Development yields

- ~4,000 housing units
- ~2.61m SF office / lab space
- + 390,000 SF office / lab (with HRO)
- 126,000 SF of ground floor retail
- 575 existing housing units
- 610 pipeline housing units

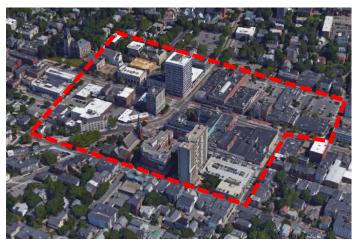

District FAR = 2.05

District FAR = 2.37 (with HRO)

Mixed-use Residential: Ground-floor Program

Central Square District FAR = 2.20

Ве	Benchmark neighborhoods		Estimated average FAR	
С	Central Square, Cambridge		2.20 ¹	
	North Point, Cambridge		2.66 ²	
A	Assembly Row, Somerville		2.90 ³	
Comr Resid	Retail (Mixed-use) Commercial		ostinno.streetwise.co/2014/11/21/w assembly-row-somerville/	

Mid-block open space

Green spaces connect to edge of B Streets. 30'

between parcels on B

B Street Front Lot Line Setback is 8" for a planting zone.

Parking and service access only on B Streets

(2)

side yard setback

network

Streets.

Mixed-use Residential: Typical Block

Maximum height of 70' for residential and 85' for commercial development

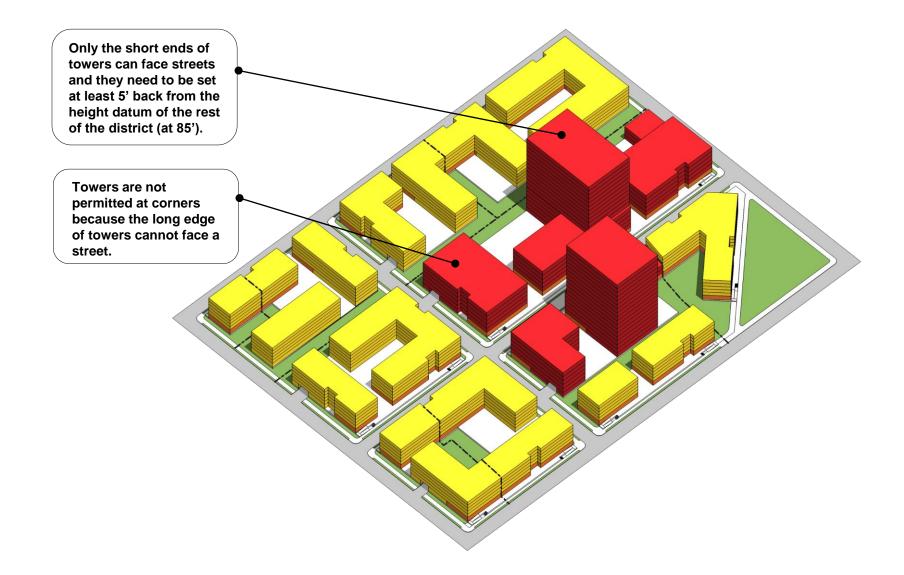

> Zero lot lines for front and sides within 65' of the front lot line.

30' side yard setback beyond the first 65' in depth from the front lot line.

A Street Front Lot Line Setback is 12" to account for a required 12' deep, 4' high plinth that meets the back of the sidewalk

Sites longer than 250' require a 30'- 45' wide penetration to the rear lot line. The gap must be located a minimum of 30' away from a side lot line.

Mixed-use Residential: Typical Block - High-rise Overlay (200')

How does this compare to the baseline?

Mixed-use Residential

And Mixed-use Residential with High-rise Overlay

Environment

These scenarios have the highest water demand due to a higher proportion of residential land uses

Mobility

The high residential density in this scenario maximizes trip reductions compared to the baseline

 Creates a clear hierarchy on A and B streets

Housing						
•	Generates the					

Generates the highest number of residential units

Jobs

Creates more jobs than the baseline

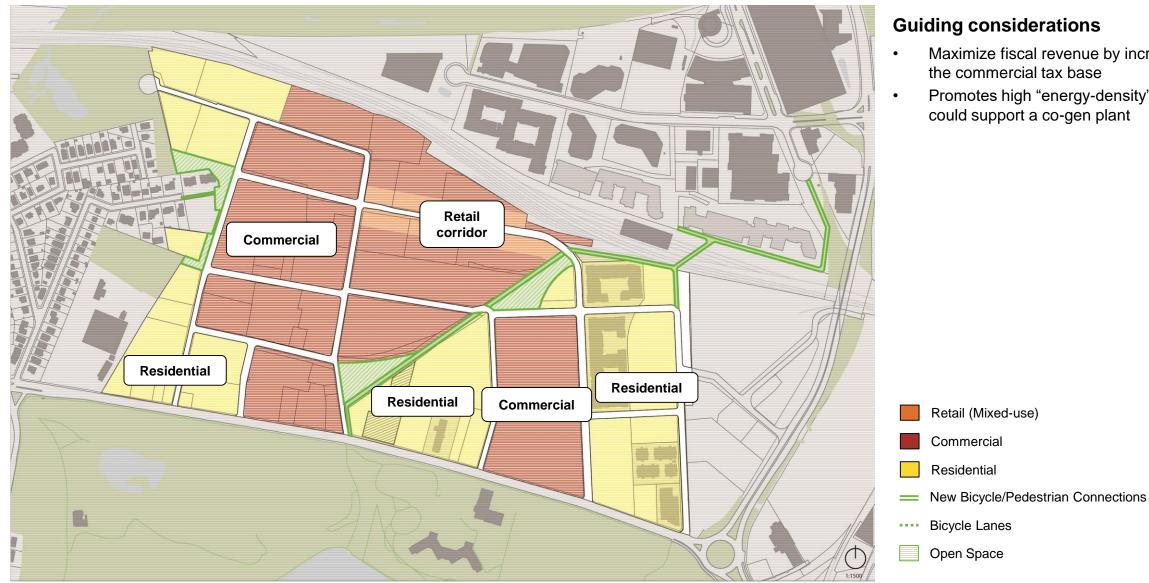

Tax revenue and fiscal impacts

•

- Increases residential population and need for city services
- Increases tax base, but not as much as commercial uses
 - Could fund critical infrastructure, such as bridge

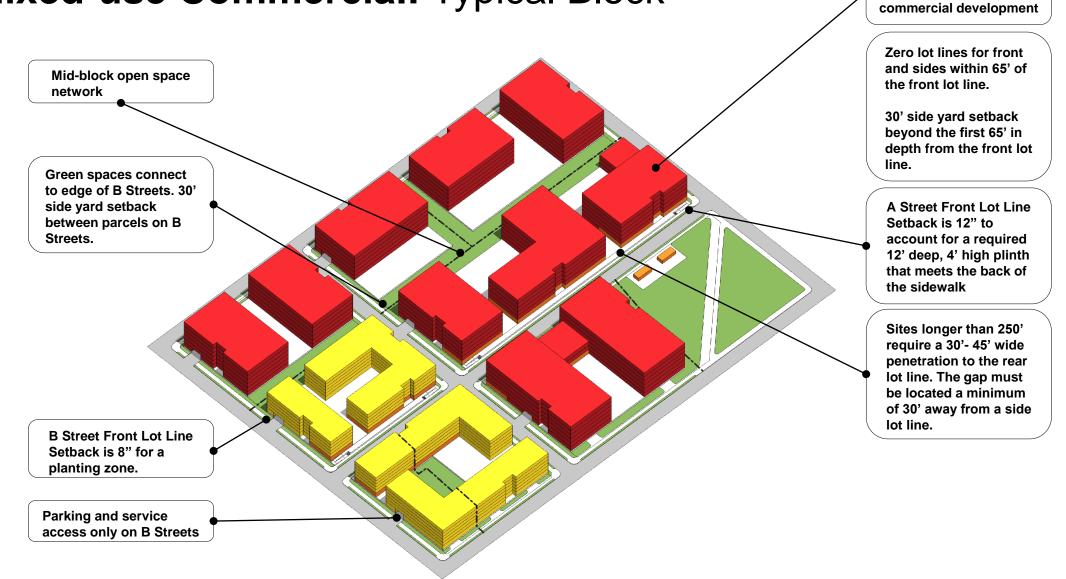

Mixed-use Commercial: Same urbanism, commercial emphasis

Guiding considerations

- Maximize fiscal revenue by increasing the commercial tax base
- Promotes high "energy-density" uses that could support a co-gen plant

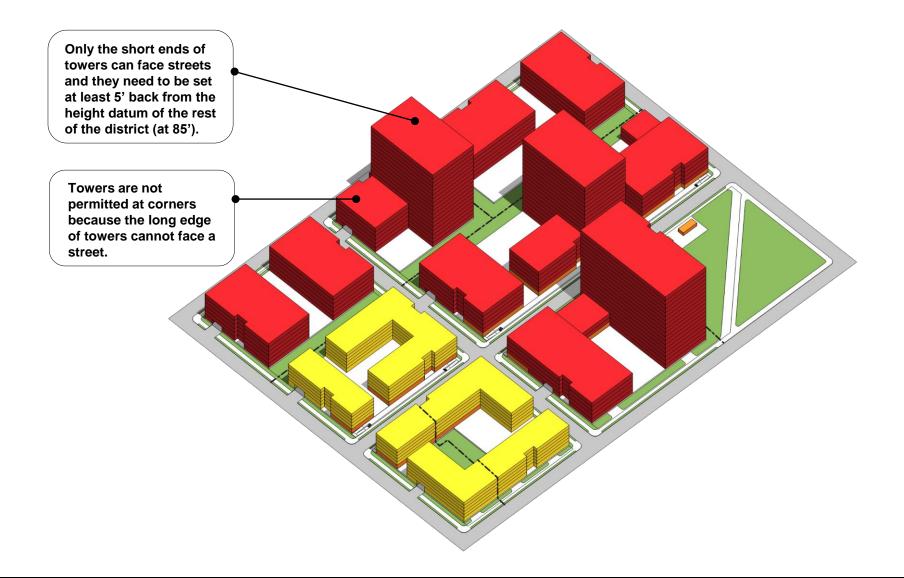

Mixed-use Commercial: Typical Block

Maximum height of 70'

for residential and 85' for

Mixed-use Commercial: Typical Block – High-rise Overlay (200')

Mixed-use Commercial: Ground-floor Program

Development yields

- ~1,800 housing units
- ~5.9m SF office / lab space
- + 860,000 SF office / lab (with HRO)
- 126,000 SF of ground floor retail
- 575 existing housing units
- 610 pipeline housing units

District FAR = 2.34

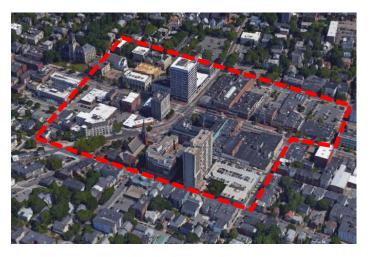

.

District FAR = 2.64 (with HRO)

Mixed-use Commercial: Ground-floor Program

Central Square District FAR = 2.20

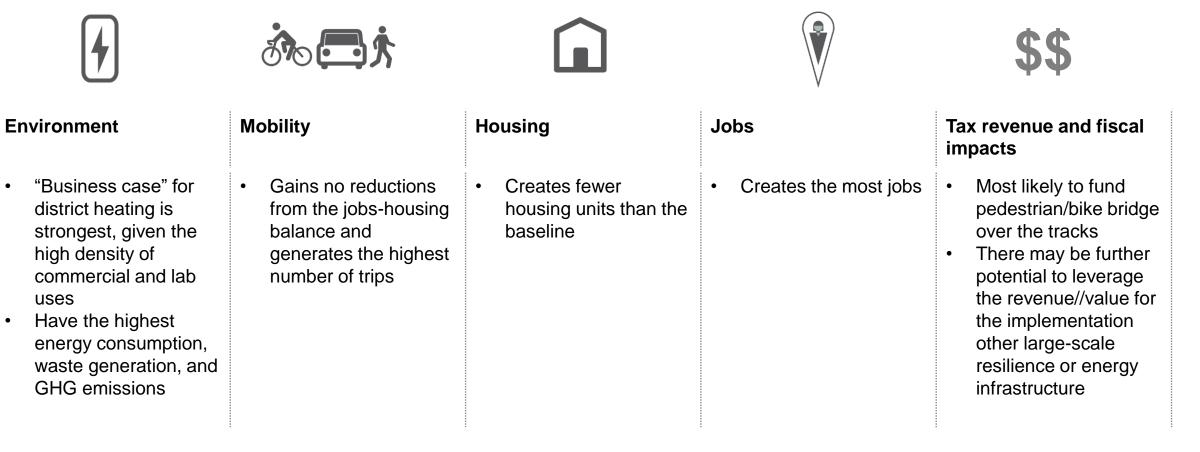

District FAR similar to Central Square

- Retail (Mixed-use)
 - Commercial
- Residential
- New Bicycle/Pedestrian Connections
- Bicycle Lanes
 - Open Space

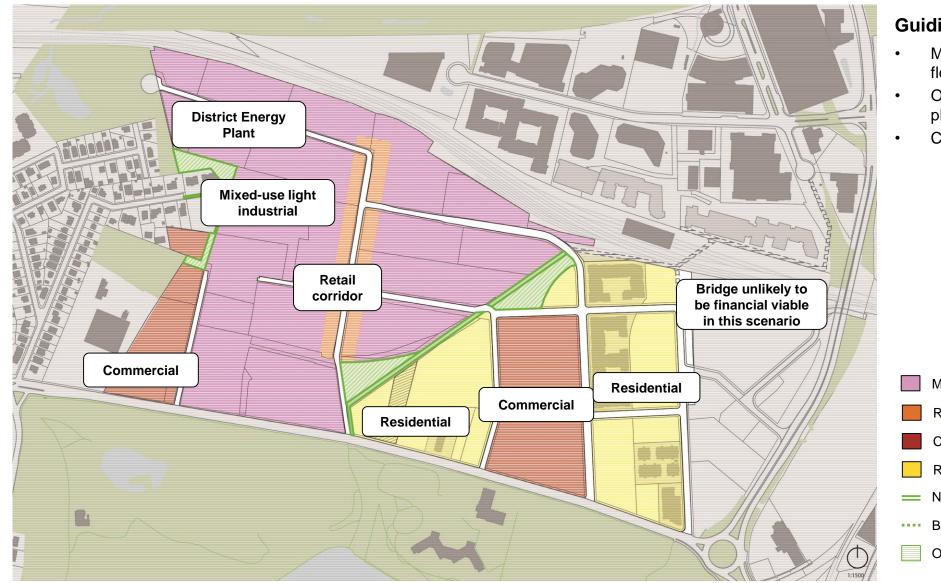

How does this compare to the baseline?

Mixed-use Commercial

And Mixed-use Commercial with High-rise Overlay

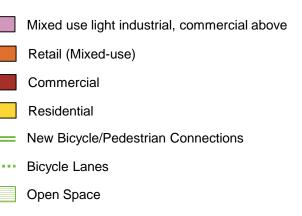

Mixed-use Industrial: Light industrial/commercial emphasis

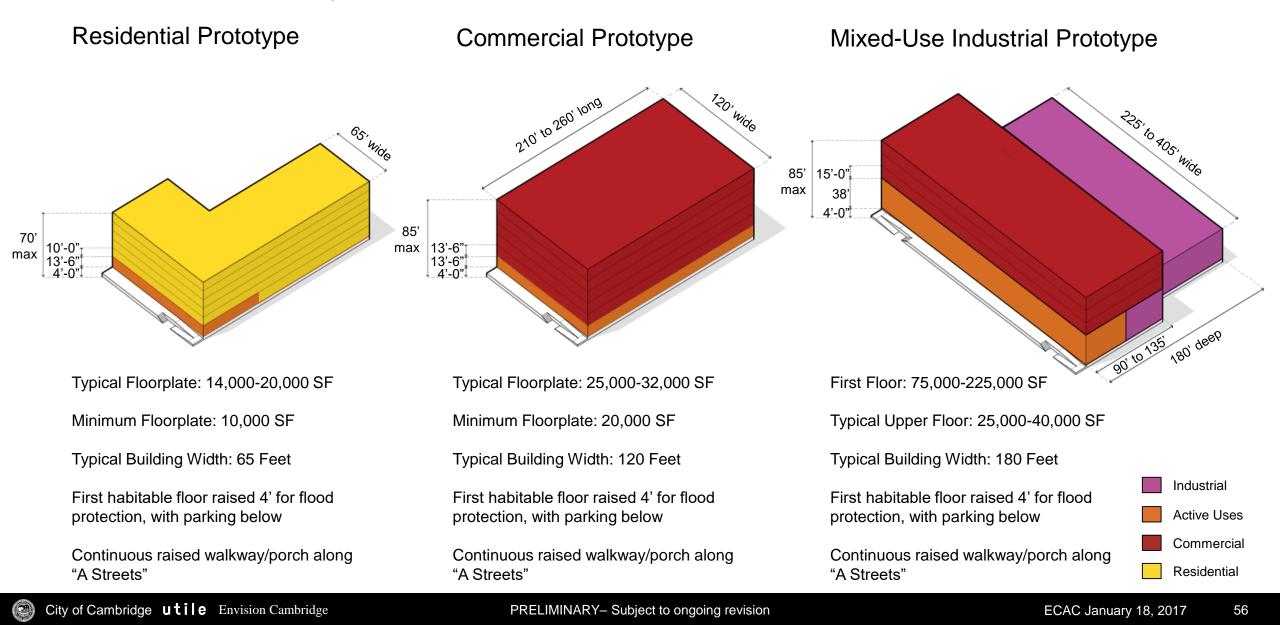

Guiding considerations

- Minimize residential development in the floodplain
- Optimizes land uses to best suit the 4' plinth elevation
- Creates jobs with a low barrier to entry

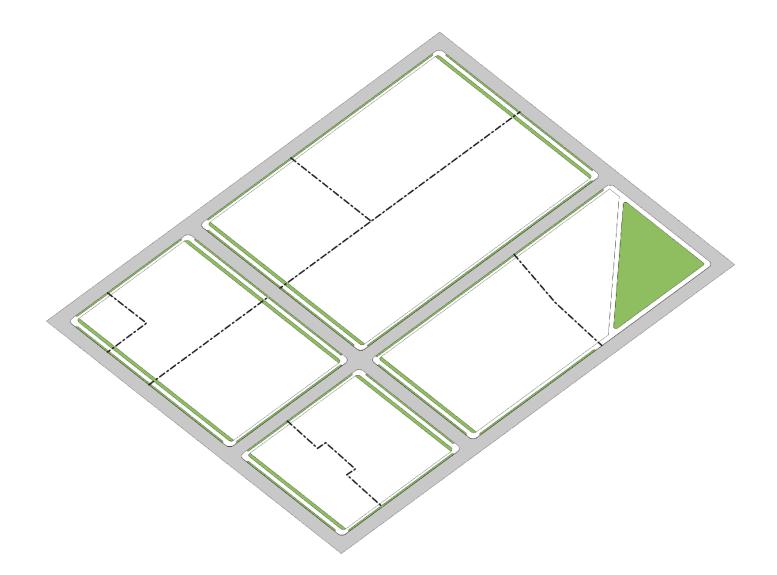

Scenario Building Prototypes

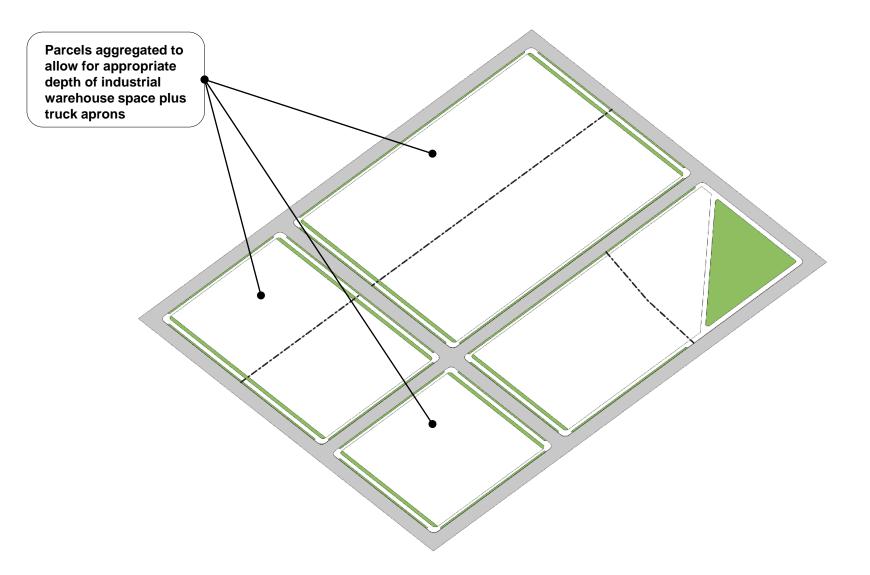

Mixed-use Industrial: Mobility and circulation

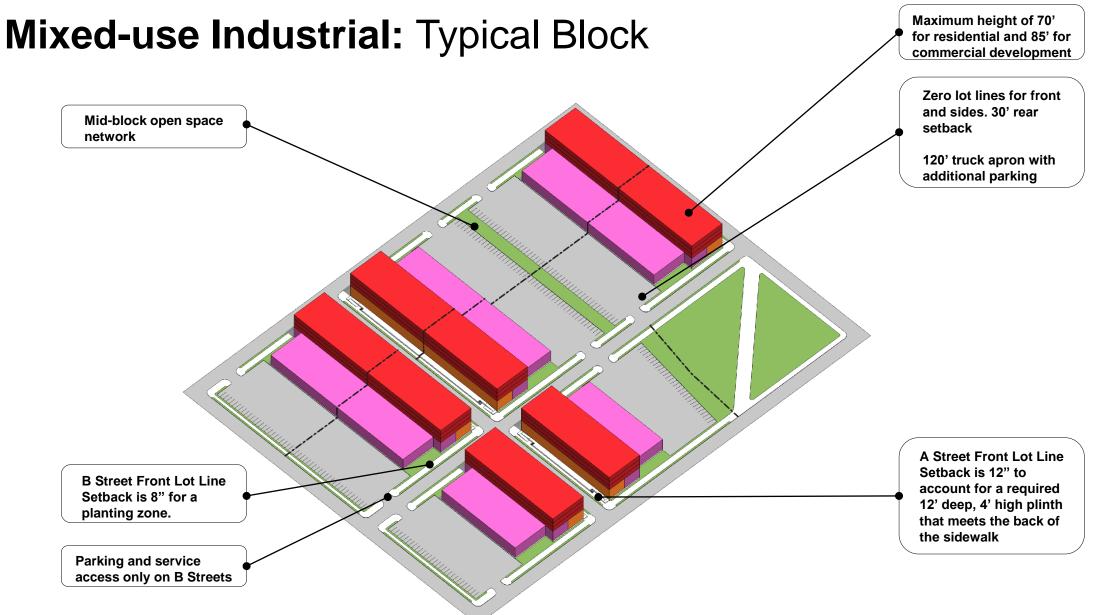

Mixed-use Industrial: Typical Block — Parcels

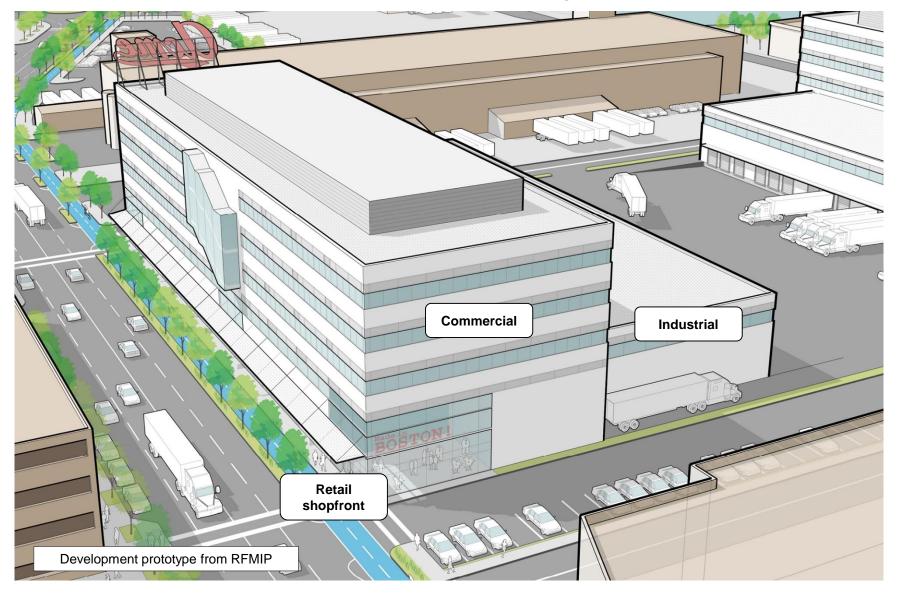

Mixed-use Industrial: Typical Block — Aggregated Parcels

Mixed-use Industrial: Building Prototype

- Industrial / warehouse uses on ground floor with 3 floors of commercial office space above
- First habitable floor elevated to 4' above street-level (not shown in image). Total building height up to 85'
- Option to add ground floor retail in front of industrial / warehouse space along primary streets
- Floor area ranges from 36,000 SF to 68,500 SF (per floor)
- Flexible floor plate depth on upper floors accommodates a variety of commercial uses - office R&D, fabrication, etc.
- Floor to floor height of industrial, retail spaces is 31'
- Floor to floor height of commercial spaces is 13'- 6"

Mixed-use Industrial: Ground-floor Program

Development yields

- ~1,000 housing units
- ~2.16m SF office / lab space
- ~79,000 SF of ground floor retail
- ~648,000 SF of industrial space
- ~1,300 industrial jobs
- 575 existing housing units
- 610 pipeline housing units

District FAR = 1.27

Mixed use light industrial, commercial above
 Retail (Mixed-use)
 Commercial
 Residential
 New Bicycle/Pedestrian Connections
 Bicycle Lanes
 Open Space

How does this compare to the baseline?

Mixed-use Industrial

Environment

- Land use and low density lead to least energy demands
- Significant solar potential (when compared to consumption) given the large flat roofs
- Places fewest residents in the floodplain

Mobility

- Does not achieve a distributed street network as the value captured from new development will not be sufficient to fund this
- Need for truck access on primary roads further detracts from the walkability in this district

Housing

Creates fewest
 housing units

Jobs

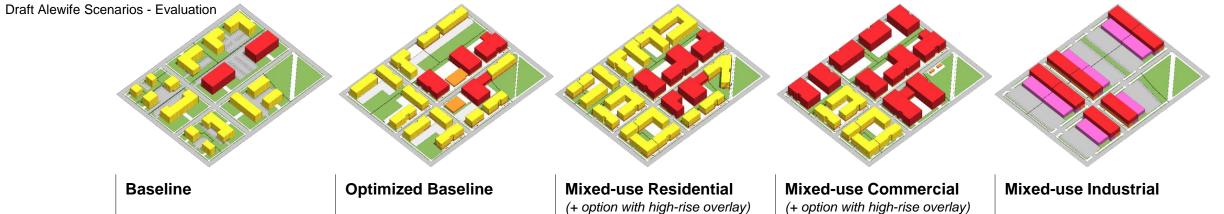

- Creates jobs with a lower barrier to entry
- Creates more jobs than the baseline

Tax revenue and fiscal impacts

- Challenge from the real estate market perspective and pointing to the need for a City mandate to develop these uses in Alewife
- Least likely to fund critical infrastructure (e.g., ped/bike bridge or new stormwater infrastructure)

Draft Alewife Scer	narios - Impetus				
	Baseline	Optimized Baseline	Mixed-use Residential (+ option with high-rise overlay)	Mixed-use Commercial (+ option with high-rise overlay)	Mixed-use Industrial
Impetus	 Understand the potential buildout under current zoning, consistent with recent projects Evaluate the resulting urbanism in terms of urban form, walkability, and contribution to a comprehensive environmental agenda Compare to alternative scenarios 	 Create better urbanism at the same allowed density and use-mix as currently allowed Complete the street grid Introduce a bike-ped path with a stormwater function and associated open spaces along it 	 Create better urbanism, but with an increase in density skewed to residential. Incentivize less suburban development Significantly increase housing Other urban design features the same as the Optimized Baseline Generate more RE revenue to help defray the costs of infrastructure improvements 	 Create better urbanism with the same use-mix, but with an increase in density skewed to commercial development Provides jobs to residents Other urban design features the same as the Optimized Baseline Generate more RE and tax revenue to help defray the costs of infrastructure improvements Increase commercial tax base Minimize residents in the floodplain 	 Provides low-barrier to entry jobs to residents Provides space for fabricators and start-ups Avoids building residential in floodplain Increases truck traffic in the area Truck servicing requirements will make it challenging to make the district pedestrian and bicycle-friendly

			(+ option with high-rise overlay)	(+ option with high-rise overlay)	
Environment	Lacking in district-wide strategy for flood mitigation	Improved block structure allows for a systemic stormwater solution	Same as Optimized Baseline, but less pervious surface will require more aggressive strategies on building roofs	Most likely to work for a district energy	Best PV potential given the consumption to production ratio
Mobility	Lack of street connectivity and hierarchy thwarts alternative modes	Minimal difference in density and use, but improved urbanism will encourage biking and walking	High percentage of residential use means that trip generation is not as significant as commercial scenario	High percentage of commercial uses means the most trips of the scenarios	Requires truck access Least likely to produce multimodal environment
Housing	Baseline for comparison (~2,400 new housing units)	Slightly more than baseline because more of the allowable FAR can be used with new setback rules (~2,800 units)	Most housing units, including affordable units \rightarrow most residents in floodplain (~4,000 units)	Less housing than residential, but more than other scenarios (~1,800 units)	Fewest housing units and fewest residents in the floodplain (1,000 units)
Jobs	Baseline for comparison (~10,000 jobs)	Slightly more than baseline because more of the allowed FAR can be used with new setback rules (~9,200 jobs)	More jobs than the Optimized Baseline, because of the increase in density (~15,500 jobs, +2,200 w/HRO)	Generates the most jobs, skewed to R&D and Life Science (~34,300 jobs, +4,900 w/HRO)	Creates diversity of jobs and provides commercial space for start-ups and other businesses that can't afford Class A office space (1,300 industrial jobs, 12,700 commercial jobs)
Revenue/ Fiscal Impacts	Baseline for comparison	Not enough RE revenue to pay for district-wide infrastructure, including the bike/ped bridge	Generates just enough RE revenue to pay for new streets and bike/ped bridge	Maximum RE revenue for the bike/ped bridge and new streets, maximizes commercial tax revenue	Not enough RE revenue to pay for district-wide infrastructure, including the bike/ped bridge
	• Util • Envision Combridge		DV Subject to engaing revision		

Next Steps for Alewife Planning

Feedback from

- Alewife Working Group (Jan 26)
- Alewife Public Workshop (Feb 8)
- Online Survey (launching in Feb)

Refine the scenarios, then more feedback

Draft plan (late spring/early summer 2017)

Danehy Park Family Day, September 17, 2016

Discussion Questions

Having seen the scenarios and their potential pros and cons:

- What types and mix of new development is most appropriate in the Quadrangle?
- Do you have suggestions for how to approach other areas and issues in Alewife?
- What role should Alewife play in meeting the City's overall goals?
